Parks Range USAMU Weapons / Ammunition			
Coordinates of Weapon Positions	Weapon / Ammunition Type	Left Limit of Fire Mils, Grid Azimuth	Left Limit of Fire Mils, Grid Azimuth
Test Bay : 9286 8096	Weapons/ Ammo Not to Exceed 5500m	3470	3490
All Army Pistols: PF1 to FP 39: 9296 8091 - 9287 8094	Pistols, .22 cal - .45 cal	3300	3700
Demonstration Area: 8086 - 9289 8088	9295 Weapons/ Ammo Not to Exceed 5500m	3400	3600

All Army Pistol Notes: The Primary Direction of Fire (PDF) For All Army Pistols is 3500 mils with limits of fire 200 mils left and right of the PDF. This translates into a target area of 2m left and right (4m total) for every 10 meters distance, shooter to target. Example: Shooter is 20 meters from target, target area is 4m left and right (8m total) of the PDF.

Demonstration Area Notes: The Primary Direction of Fire (PDF) For The Demonstration Area is 3500 mils with limits of fire 100 mils left and right of the PDF. This translates into a target area of 1m left and right (2m total) for every 10 meters distance, shooter to target. Example: Shooter is 20 meters from target, target area is 2m left and right (4m total) of the PDF.

NOTE: Weapons and ammunition used will be various civilian, military, custom made, foreign and commercial quality. All foreign made weapons and ammunition are servicable and have been inspected, tested and certified by USAMU Customs Fire-Arms Shop (see memorandum enclosure). Any ammunition used will not have a maximum range capability to exceed 5500 meters.

31 October 2011

MEMORANDUM THRU: Chief, Range Operations, Directorate of Plans, Training & Mobilization

FOR: USAMU, Service Pistol, Action Shooting, and Customs Fire Arms Shop Section

SUBJECT: Parks Range Live Fire Scenario, Range Utilization SOP

1. USAMU is a strategic enabler of U.S. Army Accessions Command. Its first mission essential task is to support Army recruiting and accessions in an effort to connect America's people to America's Army. To this end, the Unit frequently conducts demonstrations, clinics, and competitions that routinely involve civilian participation. This civilian or non-military participation includes juniors, JROTC cadets, college students, ROTC cadets, MCoE visitors attending official events, DoD employees, non-military organizations, and organized clubs. USAMU's second mission essential task is to support the Warfighter, therefore Soldiers, other Armed Forces Services, Foreign Services, and USAMU Personnel coordinate for use of Parks Range for training and Soldier Rifle/Pistol qualifications.
2. Parks Range is a Known Distance Range. The left side (All Army Pistol Area) of the range has been developed to accommodate 35 Soldiers/Competitors. Built near the concrete wall, the target holders are 8ft wide frames and have 4 targets on each frame for each Soldier Competitors to fire from 7 to 25 yards. The range is primarily used for Marksmanship Training and Competition. Pistols, Rifles, Shotguns, Automatic and Foreign Weapons are used in the marksmanship portion of training. The right side of the range is used for Weapons and Ammunition Testing on Parks Range at the Test Bay Area. Weapons are placed into a mount and locked in place by a vice to eliminate movement when fired. A demonstration area is also located just past the concrete wall. This area will be used for rifle and pistol firing on steel targets in accordance with the USAMU steel SOP. This area will not be used unless both the All Army area and the Test Bay are inactive. The Test Bay and All Army areas can be used simultaneously under waived conditions stated in the Parks Range Waiver.
3. Controlling factors: Civilian and military personnel fire under controlled conditions at all times. During training, and in competition, a line official or range officer gives all firing commands from the center of the firing line. Civilian and military personnel are instructed when to load, when to observe their target, and their time begins when a designated start signal is given. Civilian and military personnel fire their appropriate course of fire, then a designated signal is sounded to mark when their time has expired. Line safety's and judges clear the firing line and make note of any saved rounds. The line is completely cleared prior to civilian and military personnel moving downrange to change targets or to score targets in competition.

ATAL-SBM-C

SUBJECT: Parks Range Live Fire Scenario, Range Utilization SOP

During training the NCOIC or his representative is responsible to designate the line safety that will clear weapons after each phase of firing is complete. During the firing phase it is the range safety's responsibility to ensure the range is safe until completion of that phase of fire and all weapons are cleared. All training will be contained within the berm compartment and the left side of the building, and will extend no further than the access road. In addition to the individual trainers an overall controller will monitor the entire training event. OIC ensures the target positioning will not violate the Left and Right limits in accordance with the 350-19-1-E-R.

Civilian and military personnel will shoot from standing, kneeling, crouching, and prone positions as well as being told when to load and when to observe their target. During the movement portions of training it will be one safety to one Soldier moving in-depth or in-width of the range always centering on the target they are engaging to stay within range fan limits. There will always be one shooter during movement training.

Pistol Qualification's are fired on Parks Range during the year. The alternate pistol course of fire out of FM 3-23.35 is the course that is used on this range. The NCOIC is responsible to designate a line safety that will clear weapons after each phase of firing is complete. The line is completely cleared prior to civilian or military personnel moving downrange no more than 50m to change targets or to score targets in qualification.

4. During Close Quarter Marksmanship training on Parks Range, the majority of firing is done in the semi-automatic mode. In some cases burst/automatic fire may be used in a training environment with only one Soldier firing at a time with a line safety present to ensure safe employment of the weapon system and range limits are observed. The techniques used in marksmanship training are primarily derived from FM 3-23.35, FM 3-06.11, and FM 3-22.9.

5. USAMU Personnel will ensure that all facilities accommodate Military Disabled, Non-DoD Disabled Civilians or Paralympic Competitors. Military Disabled, Non-DoD Disabled Civilians or Paralympic Competitors that cannot load their own firearms will be required to have their caregiver load their firearm under the supervision of USAMU personnel or certified range safety personnel while maintaining a safe operation and orientation of the firearm. Military Disabled, Non-DoD Disabled Civilians or Paralympic Competitors will only fire from an approved firing device and be under the direct supervision of the caregiver, USAMU personnel or certified range safety personnel while maintaining a safe operation and orientation of the firearm. When Military Disabled, Non-DoD Disabled Civilians or Paralympic Competitors fire from wheelchair or rolling devices, caregivers, USAMU personnel or certified range safety personnel will ensure that the equipments is properly secured to prevent movement while handling firearms. Military Disabled, Non-DoD Disabled Civilians or Paralympic Competitors will only put firearms on fire, clear firearms, perform misfire procedures under the direct supervision of the caregiver, USAMU personnel or certified range safety personnel while maintaining a safe operation and orientation of the firearm.

6. MOVEMENT PHASES DURING TRAINING: Movement in one of three directions: Straight forward toward down range, diagonal forward toward down range or horizontal to down

ATAL-SBM-C

SUBJECT: Parks Range Live Fire Scenario, Range Utilization SOP

range. At all times weapon will be pointed down range and in a safe direction and firing will be down range almost straight into the target and berm.

7. The USAMU use Iron Maidens and Stage design props for situational courses of fire at Parks Range. Iron Maidens will be fired upon in accordance with the dimensions described in the FB 350-19-1-E-R and range scenario/SOP. Some Steel Targets are designed to fall once fired upon. All props used on the range are obstacle-laden shooting courses (called stages) requiring anywhere from six to thirty shots on several targets. Civilian and military personnel move, negotiate obstacles, run, reload, and compete through each of several courses. These scenarios require Soldier/Competitors to deal with constantly changing props such as doors, windows, barrels, furniture, and stationary military and civilian vehicles of all types. All civilian vehicles used as barricades will have hazardous material fluids purged. All vehicles will be covered with sand bags to reduce ricochet. Military vehicles will not be used as barricades. At no time will a Soldier/Competitor move any part of the stage designs, nor will a civilian and military personnel ride or shoot on top of a vehicle while competing. All props and vehicles are not permanently fixed inside on the ranges. All props will be removed for training and qualification. Civilian and military personnel negotiate through the stages one at a time and is observed by a Range Safety Officer. All stages are well planned, rehearsed, briefed, and completed in accordance with safety waivers, range scenarios/SOPs, and Fort Benning Form 350-19-1-E-R.

8. Safety: During Movement, No Movement, and CQM, only one Soldier will move with one safety at a time. During Qualification all Soldiers will be on line at the same time engaging stationary targets. Soldiers will follow all commands of that safety while conducting training and drills. Movement is at a walking pace to teach the technique of moving and shooting. Weapons will be on safe when not engaging targets. A Combat Lifesaver and aid bag is always on the range. If required, unit will use the standard 9 Line MEDEVAC in case of illness or injury and call 911 to determine what type of evacuation is the most appropriate for the injury. MEDEVAC will be IAW MCoE Regulation 350-19 and USAIC 40-2. Landing zone for MEDEVAC aircraft will be established prior to use and will be marked appropriately. Using units higher Headquarters and Range Control will be notified in this event. In case of emergency where a cease-fire is called both hand and arm as well as verbal Cease-Fire will be given. See enclosures for target layout and weapons. All Soldiers receive Range Safety Briefings on procedures, equipment, and hazards. Laser and laser hazards are addressed prior to use. LASER warning signs will be in place prior to use. Weapons/Ammunition Malfunction Reports: When a malfunction is experienced, the OIC or Range Safety Officer will suspend all firing and immediately notify Range Control. Retain the weapons and all components and ammunition involved in place. An investigation is required and will be conducted by DOL. When an incident occurs on the range, regardless of injury or not, the OIC/RSO will immediately report it to Range Control and the using unit's higher headquarters. The following information will be furnished by the OIC/RSO to Range Control:

- a. Designation of unit.
- b. Range and location
- c. Type of weapon involved.

ATAL-SBM-C

SUBJECT: Parks Range Live Fire Scenario, Range Utilization SOP

- d. Type of ammunition involved.
- e. Brief summary of what happened.
- f. Personnel injuries and extent.
- g. Full Name, SS#, Rank and unit of injured personnel.
- h. Extent of property damage.

Intentions regarding an AR 15-6 investigation

9. Due to the ricochet area from weapons being fired in the Parks Range Test Bay Area, while firing is being done there, the firing line to the left will be shut down from firing points 24 – 38 including the entire demonstration area. These two areas will not be shot in concurrence with each other when the all of the firing points in the All Army Pistol area are required or the demonstration area is to be used.

10. POC is CPT Howard G. Rice, USAMU S-3 OIC, (706) 545-7174/1410 or howard.rice@usaac.army.mil.

MEMORANDUM FOR RECORD

SUBJECT: Standard Operating Procedures for Use of Steel Targets during USAMU Live-fire Training/Competitions

1. USAMU is a strategic enabler of U.S. Army Accessions Command. Its first mission essential task is to support Army recruiting and accessions in an effort to connect America's people to America's Army. To this end, the Unit frequently conducts demonstrations, clinics, and competitions that routinely involve civilian participation. This civilian or non-military participation includes juniors, JROTC cadets, college students, ROTC cadets, MCoE visitors attending official events, DoD employees, non-military organizations, and organized clubs. USAMU's second mission essential task is to support the Warfighter, therefore Soldiers, other Armed Forces Services, Foreign Services, and USAMU Personnel coordinate for use of Krilling Range for training and Soldier Rifle/Pistol qualifications.
2. The U.S. Army Marksmanship Unit has used steel targets since 1992 and has not had a serious incident on any ranges due to steel target ricochet accidents. As stated in Army Field Manuals, Army Safety Regulations, Department of the Army Pamphlets, Memorandums, and Documents that support proper safety techniques, Army marksmanship will always be hazardous. The awareness of the inherent risks allows the USAMU to develop and implement control measures. The use of steel targets is just one more factor to be included in the risk management program. USAMU has taken precautions to ensure proper uses of all steel targets are enforced.
3. The OIC/RSO ensures the target positioning in which the steel will be pointed downward to reduce ricochet and will not violate the Left and Right limits. The OIC/RSO will also ensure targets will be positioned at the base of the berm to avoid civilian and military from shooting over the top of the berm compartment. Civilian and military will engage targets from a safe distance in IAW the limitations described in this USAMU SOP for use of Steel Targets and the Fort Benning Form 350-19-1-E-R scenario that is used in conjunction with the Range Waiver.
4. Below are some examples of training and competition where the use of steel targets is incorporated into our mission. The following is a partial list:
 - a. Steel targets are an integral part of USAMU shooting sports course design. If we do not have steel targets to train on we will not be able to compete and win.
 - b. Utilizing steel targets for our training allows shooters to dedicate all available training time to shooting instead of moving down range and repairing paper targets.
 - c. Steel targets are more economical than paper targets and electronic targets, as they need only paint and minimal care to remain serviceable for many years.

ATAL-SBM-C

SUBJECT: Standard Operating Procedures for Use of Steel Targets during USAMU Live-fire Training/Competitions

d. Steel targets are a very important part of Train the Trainer Courses. Steel targets allow students to get visual and audio logical feedback, as well as see shot groups and coach down range performance without leaving the shooting position.

5. The following are some of the controls placed on the use of steel targets:

a. Pistol

- (1) Never closer than 7 yards with reactive or downward angled steel.
- (2) Never closer than 12 yards on Static steel.
- (3) Never on rifle steel.
- (4) Steel will be oriented so that it presents an angle of less than 24 degrees to the shooter.

b. Rifle/Automatic Weapons

- (1) Never closer than 12 yards with reactive or downward angled steel.
- (2) Never closer than 25 yards for static steel.
- (3) Never use steel core or penetrator rounds other than M855 ball.
- (4) Never use M855 ball closer than 100 yards.
- (5) Steel will be oriented so that it presents an angle of less than 24 degrees to the shooter.
- (6) Frangible ammo may be shot as close as 1 yard.
- (7) No calibers greater than 7.62x51mm inside of 100 yards without frangible ammo.

c. Shotgun

- (1) Never closer than 7 yards on any steel.
- (2) Frangible shot may be used as close as 1 yard.
- (3) No slugs, steel shot or breaching round.

6. Once steel targets are used with rifle, it will remain for rifle plates. Firing pistol ammo on rifle steel will result in excessive fragmenting of bullets on impact.

7. General safety requirements remain the same. The use of steel targets are included in the range Risk Management Worksheet, Range SOP, and Range Safety Briefings. If there is steel in any array, Wrap Around Eye Protection and Ear Protection is required for: Civilian and military for USAMU hosted events. During Training Events: Kevlar and IBA are added along with Eye and Ear Protection.

ATAL-SBM-C

SUBJECT: Standard Operating Procedures for Use of Steel Targets during USAMU Live-fire Training/Competitions

8. There will always be some amount of fragments from shooting steel targets. Once rounds impact a piece of steel the path of fragments cannot be guaranteed. By using these guidelines the risk of fragmentation to shooter will be significantly reduced, and any fragments that do will not be capable of serious injury.
9. All use of steel targets are requested from USAMU and approved by the Commanding General of Fort Benning under each USAMU range Safety Waiver.
10. Point of Contact for this memorandum is CPT Howard G. Rice, USAMU S-3 OIC, 706-545-3510, or email howard.rice@usaac.army.mil.

Proponent: nicole allaire 706-545-7174

Organization/Unit: USAMU

DECISION: Concur with conditions

This Action is adequately covered in the Existing EA titled: 'Ongoing Mission and siting Activities, USAIC, FT.Benning, GA.'

(NA): Training involving LIVE FIRE and tracked vehicles has NO CATEX -- "Ongoing Mission and Siting Activities, USAIC, Ft. Benning, GA."

REC APPROVED THROUGH 30 SEPTEMBER, 2012

Natural Resources - RCW

Conditions:

Michael Barron (709-544-7080), 7/20/2011

See attached conditions. Note locations of red-cockaded woodpeckers on attached maps. Training restrictions apply. Unit commanders must make sure that all troops know the locations of restricted areas and understand these training restrictions. This is imperative since night training may occur. Boundaries are often hard to see at night, but this is no excuse for violations to occur. Two hour time restriction is for 2 hours once every 24 hour period. Note where digging may not occur. All trenches, fighting positions, etc must be filled in prior to leaving an area. There must be no cutting down or intentional destruction of any pine trees throughout the requested area(s). Units may fire on existing ranges but must make every effort to contain their firing to the established range footprints. Targets may not be moved from their current positions nor may new targets be established without approval via a separate 144R and a site visit with this office.

Noise

Conditions:

Ellis Leeder (706 545 7576), 7/20/2011

This is normal training or flight training operations that must be conducted annually. If there are any complaints received, the Environmental Management Division IONMP and or POA programs will investigate by determining if the noise was detected by noise detection monitors, and then recommending operational noise mitigation actions to the appropriate personnel for the training actions. Please follow the MCoE Regulation 350-19 Army Sustainable Range Program Training Range and Terrain Regulations and Garrison guidelines addressing operational noise management and hours of firing operations per and (SEE CHAPTER 5 -1 SECTION C (Requests to fire .50 caliber or larger munitions, including demolitions) . In accordance with the Army's policy on environmental noise management, all efforts shall be made to minimize noise annoyances to the highest extent practicable with training operations without interfering with the proposed missions. Please follow the fly friendly program avoiding no fly zones. If any assistance or a copy of MCoE Regulation 350-19 is needed please feel free to contact Ellis Leeder at 706.545.2400 or email ellis.leeder@us.army.mil

Hazardous Materials/Waste

Conditions:

Dudley Carson (706 545 7570), 7/25/2011

Considerations for Field Training Exercises and Range Operations

1. Appropriate precautions must be taken to prevent hazardous material spills. Have adequate quantities of spill response supplies on hand. If a spill occurs use notification procedures as outlined in the Fort Benning Hazardous Waste Management Plan. Contain and clean up spill according to guidance provided by the Environmental Protection Management Branch. Any waste generated must undergo a waste stream analysis to determine appropriate management requirements. If any hazardous waste is generated it must be managed in accordance with Federal, State, Army and Fort Benning regulations.
2. Ensure personnel know the correct procedure for handling misfires at the range:
 - Closed containers (ammunition can marked 'MISFIRES') will be used for the collection of misfires at each firing range.
 - The MISFIRE container will stay closed except to add or remove misfires.
 - Misfires SHALL NOT BE COLLECTED in any open container or cardboard box.
 All excess, unused munitions (including smoke canisters) must be returned to the Ammunition Supply Point (ASP) after the range operation is complete. Defective, misfired, or otherwise unserviceable munitions may be destroyed on the range, as part of the training exercise, in coordination with EOD. A dud shall not be removed from the range; it will be marked, called into range control and will be properly disposed of by EOD personnel IAW/MCOE Reg 350-19, dated 23 July 2010.
3. Rubbish, empty containers and other waste shall be removed from the training area after the exercise. Contact EPMB for detailed information on the proper disposal of waste products resulting from the exercise.
4. Contact POC for questions or additional guidance.

CWA - Training

Conditions:

Jesse Taylor (706 545 0276), 7/21/2011

Environmental Review: Caution within training areas and motor pools should be taken to protect all nearby waterways (including perennial, intermittent streams and wetlands); as well as ground surfaces and any other sensitive areas in the vicinity of the training areas. Potential spills/releases from this activity that may occur before and/or during the FTX include: 1. Discharge and/or improperly disposal of oil or hazardous substances into or upon land, water, or into ground water areas from storage, handling and/or transportation of hazardous materials/waste; 2. Vehicle/equipment/generators leaks; 3. Fuel loading/unloading/refueling operations; 4. Field mess facilities/equipment/operations, and/or 5. Ammunitions /explosives (as applicable, before and/or during the FTX).

General SPCC Requirements: Ensure all hazardous materials are properly storage to prevent spill/discharges, to meet safety requirements for storage, and that containers are not exposed to the weather. Have adequate spill response supplies available during exercise for any spills that may likely occur. Use drip pans under vehicles and provide secondary containment for any fueling activities and hazardous material/waste storage. Locate all refueling operations and storage of hazardous materials/waste away from waterways and sensitive areas. See attached section on prevention procedures and CHECKlist (Figure 6.9.1) to be used during training exercise to comply with SPCC plan requirements. Ensure all wastewater from field mess equipment/operations particularly those involving oil/grease are collected and dispose properly. Do not discharge any wastewater into storm drains or dispose of oil/grease waste directly into land.

General ISCP Requirements: In the event of a spill/discharge -- notify Range Control by radio or call 544-6291, and they will notify E-911 for Fire Department/HAZMAT Team assistance and/or notification of the EMD office (Spill Beeper 706-317-6584). As appropriate, and if personnel are trained -- REACT to minimize spill damages. Submit a spill report to the EPMB Spill Program Manager (use Spill Response Report attached). All spills reaching navigable water must be reported immediately. The unit is responsible for the final cleanup of any spill during this exercise. Coordination with this office is required for clearance of the site.

SPECIAL NOTE: See 2010 ASP SOP Training and Deployment.doc for further training requirements.
