WARNING SUMMARY

This warning summary contains general safety warnings and hazardous materials warnings that must be understood and applied during operation and maintenance of this equipment. Failure to observe these precautions could result in serious injury or death to personnel. Also included are explanations of safety and hazardous material icons used within the technical manual.

FIRST AID DATA

For first aid information, refer to FM 4-25.11.

WARNING DESCRIPTIONS

WARNING

Ensure the sizes of the front and back carrier match by comparing information on the data label. Ensure the sizes of the attachable items match the sizes of the front and back carriers by comparing data plate information. Failure to do so could affect performance, causing injury or death.

WARNING

Ensure there are no kinks in the emergency release assembly. Failure to do so could adversely affect the function of the emergency release, causing injury or death.

WARNING

When the IOTV Gen III is assembled with additional equipment that attaches to both the front and back carriers, such as a rucksack or the Tactical Assault Panel (TAP), one side of the equipment must be detached for the emergency release function to work properly. Failure to do so could affect performance, causing injury or death.

WARNING

Ensure front and back carrier soft ballistic protection overlaps under the arm when donning the vest.

WARNING

The emergency release system should be used during emergencies or for instructional purposes only. Using the emergency release method to routinely doff the vest could result in damage to the hard armor plates. Damage to the hard armor plates could result in injury or death to the wearer.
WARNING

Do not machine wash or dry. Failure to follow these instructions may render your IBA unserviceable.

WARNING

Do not machine wash or dry the SAPI/SBI inserts. Failure to follow these instructions may degrade the SAPI/SBI ballistic protection.

WARNING

Soldiers must ensure they have the correct protective inserts. The ESAPI and ESBI have green covers and the XSAPI and XSBI have tan covers. All of these inserts provide a higher level of protection than the Small Arms Protective Insert (SAPI) and the Side Ballistic Inserts (SBI) which have black covers.

ESAPI should be worn by all personnel in-theater. If a service member has the older black SAPI plates, they should be turned in and replaced with green ESAPI plates. Failure to ensure the correct plate while conducting combat operations may result in injury or death.

WARNING

Fabric repair in this work package does not apply to the fabric on the soft ballistic inserts. Any damage to the soft ballistic inserts is cause for turn in. Failure to follow these instructions could result in degraded ballistic protection.

WARNING

Pressing, starching, dry cleaning, or the use of fabric softener will degrade the IBA. Failure to following these instructions could result in harm to the Soldier.
LIST OF EFFECTIVE PAGES/WORK PACKAGES

NOTE: Zero in the “Change No.” column indicates an original page or work package.

Original: 1 December 2012

TOTAL NUMBER OF PAGES FOR FRONT AND REAR MATTER IS 26 AND TOTAL NUMBER
OF WORK PACKAGES IS 20, CONSISTING OF THE FOLLOWING:

REPORTING ERRORS AND RECOMMENDING IMPROVEMENTS

You can help improve this publication. If you find any errors, or if you would like to recommend any improvements to the procedures in this publication, please let us know.

The preferred method is to submit your DA Form 2028 (Recommended Changes to Publications and Blank Forms) through the Internet on the TACOM Unique Logistics Support Applications (TULSA) Web site. The Internet address is https://tulsa.tacom.army.mil. Access to all applications requires CAC authentication, and you must complete the Access Request form the first time you use it. The DA Form 2028 is located under the TULSA Applications on the left-hand navigation bar. Fill out the form and click on SUBMIT. Using this form on the TULSA Web site will enable us to respond more quickly to your comments and to better manage the DA Form 2028 program. You may also mail, e-mail, or fax your comments or DA Form 2028 directly to the U.S. Army TACOM Life Cycle Management Command. The postal mail address is U.S. Army TACOM Life Cycle Management Command, ATTN: AMSTA-LCL-MPP/ TECH PUBS, MS-727, 6501 E. 11 Mile Road, Warren, MI 48397-5000. The e-mail address is tacomlcmc.daform2028@us.army.mil. The fax number is DSN 786-1856 or Commercial (586) 282-1856. A reply will be furnished to you.

DISTRIBUTION STATEMENT A: Approved for public release; distribution is unlimited.

HOW TO USE THIS MANUAL

HOW TO OBTAIN TECHNICAL MANUALS

When a new system is introduced to the Army inventory, it is the responsibility of the receiving units to notify and inform the Unit Publications Clerk that a Technical Manual is available for the new system. Throughout the life cycle of the new system, the Publications Proponent will also provide updates and changes to the Technical Manual.

To receive new Technical Manuals or change packages to fielded Technical Manuals, provide the Unit Publications Clerk the full Technical Manual number, title, date of publication, and number of copies required. The Unit Publications Clerk will then justify the request through the Unit Publications Officer. When the request is approved, DA Form 12-R is used to order the Technical Manual from the Army Publishing Directorate (APD). Obtain the form and request a publications account from the APD Web site at http://www.apd.army.mil. Once on the Website click on the Orders/Subscriptions/Reports’ tab. From the dropdown menu, select “Establish an Account,” then select “Tutorial” and follow the instructions in the tutorial presentation.

Complete information for obtaining Army publications can be found in DA PAM 25-33.

Organization of This Manual

In this manual, primary chapters appear in upper case/capital letters; work packages are presented in numeric sequence, e.g., 0001, 0002; paragraphs within a work package are not numbered and are presented in a titled format. For a first level paragraph, titles are in all bold, uppercase, capital letters, e.g., FRONT MATTER. Subordinate paragraph titles are uppercase for the first letter of the first word of each principle word, all bold, e.g., Manual Organization and Page Numbering System. The location of additional material that must be referenced is clearly marked. Illustrations supporting maintenance procedures/text are located underneath, or as close as possible to, their referenced paragraph. Notes, Cautions, and Warnings are located directly above the procedure to which they apply.

FRONT MATTER. Front matter consists of front cover, warning summary, title block, table of contents, and how to use this manual page.

CHAPTER 1 - GENERAL INFORMATION, EQUIPMENT DESCRIPTION, AND THEORY OF OPERATION. Chapter 1 contains introductory information on the Interceptor Body Armor (IBA) as well as theory of operation.
HOW TO USE THIS MANUAL – CONTINUED

CHAPTER 2 - OPERATOR INSTRUCTIONS. Chapter 2 contains information on assembling, donning, doffing and operating the IBA system.

CHAPTER 3 – PREVENTIVE MAINTENANCE CHECKS AND SERVICES. Chapter 3 identified preventive maintenance checks and services information.

CHAPTER 4 – MAINTENANCE INSTRUCTIONS. Chapter 4 provides maintenance procedures, preparations for storage and shipment authorized at the service level.

CHAPTER 5 - SUPPORTING INFORMATION. Chapter 5 contains references, Components of End Items List (COEI), Basic Issue Items List (BII), and expendable and durable items list.

REAR MATTER. Rear matter consists of alphabetical index, DA Form 2028, authentication page, and back cover.

Manual Organization and Page Numbering System. The manual is divided into eight major chapters that detail the topics mentioned above. Within each chapter are work packages covering a wide range of topics. Each work package is numbered sequentially starting at page 1. The work package has its own page numbering scheme and is independent of the page numbering used by other work packages. Each page of a work package has a page number of the form XXXX-YY where XXXX is the work package number (e.g. 0010 is work package 10) and YY represents the number of the page within that work package. A page number such as 0010-1/2 blank means that page 1 contains information but page 2 of that work package has been intentionally left blank.

Finding Information. The table of contents permits the reader to find information in the manual quickly. The reader should start here first when looking for a specific topic. The table of contents lists the topics, figures, and tables contained within each chapter and the work package sequence number where it can be found.

WARNINGS, CAUTIONS, AND NOTES

A warning identifies a clear danger to the person doing that procedure.

A caution identifies risk of damage to the equipment.

A note is used to highlight essential procedures, conditions, or statements or convey important instructional data to the user.
CHAPTER 1

GENERAL INFORMATION, EQUIPMENT DESCRIPTION, AND THEORY OF OPERATION FOR IMPROVED OUTER TACTICAL VEST GEN III (IOTV GEN III)
OPERATOR MAINTENANCE
IMPROVED OUTER TACTICAL VEST GEN III
GENERAL INFORMATION

SCOPE

This technical manual provides operator instructions for the Improved Outer Tactical Vest (IOTV) Gen III, Small Arms Protective Insert, Side Ballistic Inserts, and ancillary equipment of the Interceptor Body Armor (IBA) system.

MAINTENANCE FORMS, RECORDS, AND REPORTS

Department of the Army forms and procedures used for equipment maintenance will be those prescribed by (as applicable) DA PAM 750-8, The Army Maintenance Management System (TAMMS) Users Manual; DA PAM 738-751, Functional Users Manual for the Army Maintenance Management Systems - Aviation (TAMMS-A); or AR 700-138, Army Logistics Readiness and Sustainability.

REPORTING EQUIPMENT IMPROVEMENT RECOMMENDATIONS (EIR)

If your IOTV Gen III needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you do not like about your equipment. Let us know why you do not like the design or performance. If you have Internet access, the easiest and fastest way to report problems or suggestions is to follow the instructions and links below:

For ALL non-Aviation/Missile Warranty, EIR and PQDRs, submit through the Web Product Quality Deficiency Reporting (PQDR) site. The Web PQDR Web site is: http://www.nslcptsmh.csd.disa.mil/webpqdr/webpqdr.htm.

New accounts can be established at the following address: http://www.nslcptsmh.csd.disa.mil/accessforms/uarform.htm.

You may also submit your information using an SF 368 (Product Quality Deficiency Report). You can send your SF 368 using e-mail, regular mail, or fax using the addresses/fax numbers specified in (DA PAM 750-8, The Army Maintenance Management System (TAMMS) Users Manual OR DA PAM 738-751. We will send you a reply.

CORROSION PREVENTION AND CONTROL (CPC)

Corrosion Prevention and Control (CPC) of Army materiel is a continuing concern. It is important that any corrosion problems with any items be reported so that the problem can be corrected and improvements can be made to prevent the problem in future items.

Plastics, composites, and rubbers can also degrade. Degradation is caused by thermal (heat), oxidation (oxygen), solvation (solvents), or photolytic (light, typically UV) processes. The most common exposures are excessive heat or light. Damage from these processes will appear as cracking, softening, swelling, and/or breaking.

SF Form 368, Product Quality Deficiency Report should be submitted to the address specified in DA PAM 750-8, The Army Maintenance Management System (TAMMS) Users Manual.
DESTRUCTION OF ARMY MATERIEL TO PREVENT ENEMY USE

Destruction of Army materiel to prevent enemy use shall be in accordance with TM 750-244-1-2.

PREPARATION FOR STORAGE OR SHIPMENT

Refer to WP 0011 for storage and shipping procedures.

END OF WORK PACKAGE
EQUIPMENT CHARACTERISTICS, CAPABILITIES, AND FEATURES

The Interceptor Body Armor (IBA) system is a modular system that consists of a vest assembly, hard armor, and ancillary equipment (attachments) that increase the area of coverage and level of protection.

The IBA system is issued to Soldiers in a variety of configurations contingent upon operations. Some vest assemblies are issued with ancillary equipment while with other vest assemblies ancillary equipment is issued separately.

Therefore, the term ancillary equipment, as used in this manual, is used to describe the attachments to the base vest configuration. Refer to the Components of End Item (COEI) and Basic Issue Items (BII) lists to determine how ancillary equipment is issued.

Vest Assembly

The IBA vest assembly (IOTV Gen III) consists of a front carrier, a back carrier, an emergency release assembly, a yoke and collar assembly, and a side plate carrier.

Ancillary Equipment

Ancillary equipment includes the deltoid protectors, lower back protector, and groin protector. The deltoid and lower back protectors are designed to be worn attached to the vest assembly. The groin protector is designed to be worn attached to the ACU trousers. These items increase the area of ballistic protection when worn correctly. Some ancillary equipment may be issued as a part of the base vest assembly contingent upon operations.

Hard Armor

There are two types of hard armor, Small Arms Protective Inserts (SAPI) and Side Ballistic Inserts (SBI). SAPI hard armor includes Enhanced Small Arms Protective Inserts (ESAPI) and the X Small Arms Protective Inserts (XSAPI). SBI hard armor includes Enhanced Side Ballistic Inserts (ESBI) and X Side Ballistic Inserts (XSBI). The hard armor plates provide additional levels of protection to the front, back, and sides of the Soldier.

Interoperability

The IOTV Gen III is compatible with Modular Lightweight Load-carrying Equipment (MOLLE) components and with the Nett Warrior System.
LOCATION AND DESCRIPTION OF MAJOR COMPONENTS

Vest Assembly

Front Carrier. The front carrier (Figure 1) attaches to the back carrier and side plate carrier with buckles.

In the center of the neckline is the location for rank placement. Behind the rank placement is a pocket for storage of the quick release handle of the emergency release assembly. There is also a location for the name tape placement on the right side of the chest area.

Pouch Attachment Ladder System (PALS) (webbing) is sewn on the front panel of the vest for attaching items.

The buckle ends used to attach the side plate carriers are underneath the front panel of the vest. The pull strap attached to the front panel is used to lift up the panel. The data label for the vest with essential information is located on the inside of the front carrier.

Figure 1. Front Carrier.
LOCATION AND DESCRIPTION OF MAJOR COMPONENTS – CONTINUED

Vest Assembly – Continued

Front Ballistic Insert. The soft front ballistic insert is located inside the front carrier and provides ballistic protection. The front ballistic insert has loop fastener tape and a data label (Figure 2).

![Front Ballistic Insert](image)

Figure 2. Front Ballistic Insert.

Back Carrier. The back carrier (Figure 3) has two shoulder straps with attached buckles to which the front carrier attaches. On the upper portion of the back carrier there is a drag strap located on the upper center portion of the carrier.

There are two panels, both of which seal with hook and loop tape. The smaller, upper access panel just below the drag strap provides access to the pockets for the hard armor. The larger, lower panel provides access to the adjustment points for the side plate carrier.

Under the lower panel there are two rows of webbing to which the side plate carrier attaches with a webbing hanger. The webbing loops on the end of the plate carriers attach to the webbing loops on the back carrier with the webbing hanger. The webbing hanger runs through the webbing loops on the side plate carrier and the back carrier, and secures the two together.
Vest Assembly – Continued

Back Carrier – Continued.

All sizes of the back carrier (except the extra large) are designed with two outside pockets for SAPI plates—the innermost pocket (closest to the body) is for a SAPI that is the same size as the IOTV Gen III. The second, larger pocket closest to the vest exterior is designed for a SAPI that is the next size larger than the IOTV Gen III. Both pockets are accessed by lifting the upper access panel.

Figure 3. Back Carrier.
Vest Assembly - Continued

**Back Ballistic Insert.** The soft back ballistic insert is located inside the back carrier and provides ballistic protection. The back ballistic insert has loop fastener tape and a data label (Figure 4).

Figure 4. Back Ballistic Insert.

**Side Plate Carriers.** The side plate carriers are universal and either can be used on the left or right side. The side plate pockets that attach to the inside of the side plate carriers are also universal and hold the SBI plates (Figures 5 and 6).

Figure 5. Side Plate Carrier (Exterior).

Figure 6. Side Plate Carrier (Interior) with Pocket.
Vest Assembly – Continued

Yoke/Collar Assembly. The yoke/collar assembly (Figure 7 and 8) comes in two separate pieces: front and back. These attach to the front and back carriers. The yoke/collar assembly provides additional ballistic protection to the neck and shoulders.

Figure 7. Yoke/Collar Assembly (Exterior).  Figure 8. Yoke/Collar Assembly (Interior).
Emergency Release Assembly. The emergency release assembly (Figure 9) comes in one size and is installed in the front carrier. The assembly includes a webbing strap (Figure 9, Item 1) as an emergency release handle and a base plate (Figure 9, Item 2) with four cables (Figure 9, Item 3) attached.

Figure 9. Emergency Release Assembly.
LOCATION AND DESCRIPTION OF MAJOR COMPONENTS – CONTINUED

Vest Assembly – Continued

Emergency Release Assembly – Continued.

When the emergency release strap is pulled (Figure 10, Item 1), the emergency release function is activated and the vest assembly completely detaches and falls away. The emergency release strap lays under the access panel (Figure 10, Item 2) and on top of the emergency release base plate reinforcement (the U-shaped webbing) (Figure 10, Item 3).

![Figure 10. Emergency Release Strap.](image)

The two outermost cables of the assembly (labeled with magenta tape) are installed in the male ends of the buckles at the shoulders of the front carrier. The two innermost cables (labeled with white tape) are installed in the male ends of the buckles under the bottom panel of the front carrier (Figure 11).

![Figure 11. Emergency Release Cable Connections.](image)
Ancillary Equipment

The ballistic protection for the IBA vest assembly can be extended with ancillary equipment. Ancillary equipment for the IOTV Gen III includes deltoid protectors, groin protector, and lower back protector.

Each item of ancillary equipment consists of a soft ballistic insert inside a carrier component. The groin protector also has a firm plastic insert.

**Lower Back Protector.** The lower back protector (Figures 12 and 13) provides additional protection for the lower spine and pelvis. The lower back protector attaches to the inside of the back carrier using two nylon straps and snap fasteners.

![Lower Back Protector (Exterior)](image1)

**Figure 12.** Lower Back Protector (Exterior).

![Lower Back Protector (Interior)](image2)

**Figure 13.** Lower Back Protector (Interior).
Ancillary Equipment – Continued

Deltoid Protectors. The deltoid protectors (Figure 14 and 15) provide additional ballistic protection to the shoulders and upper arms. They attach to the shoulder sections of the vest and use nylon webbing straps to keep the protectors wrapped around the arm.

Figure 14. Deltoid Protectors (Exterior).  
Figure 15. Deltoid Protectors (Interior).
Ancillary Equipment – Continued

**Groin Protector.** The groin protector (Figures 16 and 17) is worn on the ACU trouser and provides additional protection to the femoral arteries and pelvis. It is a new design for the IOTV Gen III and is attached to the front carrier for storage only. The attachment straps are tucked into the groin protector carrier when not attached to the front carrier.

![Groin Protector Diagram]

**Figure 16. Groin Protector (Interior).**

**Figure 17. Groin Protector (Exterior).**
Hard Armor

There are two types of hard armor plates: Small Arms Protective Inserts (SAPI) and Side Ballistic Inserts (SBI). Both SAPI and SBI are worn with the concave side (data label side) toward the body.

**SAPI** – The Enhanced Small Arms Protective Inserts (ESAPI) have green covers (Figure 18) and provide protection for the chest and back against 7.62 mm bullets. The X Small Arms Protective Inserts (XSAPI) have tan covers and provide greater protection than the ESAPI for the chest and back.

**SBI** – The Enhanced Side Ballistic Inserts (ESBI) have green covers and provide side protection against 7.62 mm bullets. The X Side Ballistic Inserts (XSBI) have tan covers and provide greater side protection than the ESBI.

Figure 18. Interior and Exterior Faces of ESAPI.
DIFFERENCES BETWEEN MODELS

The IOTV Gen III has the ability to accept SAPI plates one size larger than the vest size (back carrier only), an improved groin protector, and a new emergency release assembly system which, when activated, fully discharges the vest assembly.

The lower back protector, deltoid protectors, side plate pockets, and ballistics for the front and back carriers are fully interchangeable with the IOTV Gen II components of the same size.

Vest Assembly

**Front Carrier.** The IOTV Gen III front carrier (Figure 19) has equipment attachment rings at the left and right shoulders designed for attaching the Tactical Assault Panel (TAP) or other equipment and buckles for attaching the side plate carrier.

![Figure 19. IOTV Gen III Assembly (Front View).](image-url)
DIFFERENCES BETWEEN MODELS - CONTINUED

**Back Carrier.** The IOTV Gen III back carrier (Figure 20) has two shoulder straps with buckles to which the front carrier attaches. There are two access panels. The upper access panel provides access to the pockets for the hard armor and the large, lower panel provides access to the adjustment points for fitting the side plate carrier.

**Emergency Release Assembly.** The IOTV Gen III emergency release assembly provides a single activation point instead of a draw cord as with earlier IOTV models.

**Side Plate Carriers.** The IOTV Gen III vest has a left and a right side plate carrier with side plate pockets to hold the SBI plates. The side plate carriers and pockets for the IOTV Gen III are universal and the pockets are removable. The IOTV Gen III universal side plate carriers also have a stiff plastic liner that provides extra support.

**Groin Protector.** The groin protector provides additional protection to the femoral arteries and pelvis and is worn on the belt loops of the ACU trouser. The attachment loops tuck into the groin protector carrier when not attached to the front carrier.

END OF WORK PACKAGE
THEORY OF OPERATION

Different field scenarios require different levels of protection for the Soldier. Unit commanders will prescribe the level of protection required for a mission.

The most basic configuration of the IOTV Gen III vest assembly consists of the front and back carriers with soft ballistic inserts, two side plate carriers with side plate pockets, yoke/collar assembly, and the emergency release assembly.

The ancillary equipment provides protection for areas not covered by the basic configuration. The deltoid protectors provide protection for the shoulders and upper arms. The groin protector provides protection for the femoral arteries and pelvis. The lower back protector provides protection for the lower spine and pelvis.

The next level of protection is hard armor plates in addition to the soft ballistic inserts in the front and back carriers of the vest assembly. Ensure the soft ballistic protection remains flat and smooth in the carriers, and insert the side ballistic plates in the side plate pockets.

Interceptor body armor (IBA) is designed to protect the service member from small-arms fire to include 7.62 mm and 9 mm bullets as well as fragmentation.

Emergency Release Function

The IOTV Gen III vest has a quick release function designed to be used during emergency situations only. When the IOTV Gen III is assembled with some or all of the ancillary equipment, the quick release function can be used to doff the vest rapidly in emergency situations. Such situations could include quick access for medical attention or removing the vest quickly to swim.

Once the function has been used, the vest can be reassembled easily to provide ballistic protection.

END OF WORK PACKAGE
CHAPTER 2

OPERATOR INSTRUCTIONS FOR IMPROVED OUTER TACTICAL VEST GEN III (IOTV GEN III)
The Interceptor Body Armor (IBA) system is a modular system that consists of a vest assembly, hard armor, and ancillary equipment that increases the area of coverage and level of protection.

There are no controls or indicators for this equipment.

END OF WORK PACKAGE
INITIAL SETUP

ASSEMBLY AND PREPARATION FOR USE

The Interceptor Body Armor (IBA) system must be sized properly to protect the Soldier from ballistic threats. Verify that each component of the system is the correct size before assembling it for use.

Inventory

NOTE

With the exception of the groin protector, all components and ancillary equipment for the IOTV Gen III are compatible with the components and ancillary equipment for the IOTV Gen II. When conducting inventory, any combination of components will make up a system as long as all components are present and sized properly.

1. Inventory the system using Table 1.
   a. The first column lists the name of the component to be inventoried.
   b. The second column indicates the quantity of that item required to make a complete IBA system for the IOTV Gen III configuration.
   c. The third column has pictures of each component for the IOTV Gen III.

NOTE

The following table shows pictures of each component for easy identification. Refer to WP 0002 for more details.

2. Check the interior side of each component for a data label.

3. Confirm each component is the correct size for your system as indicated in Table 2.
   a. Find the vest size of your IOTV Gen III on the top row of Table 2.
   b. Locate each component in the first column of Table 2.
   c. The correct size for each component is specified at the intersection of the row for the component and the column for the vest size.

4. If a component is not the correct size or if it does not have a data label, turn it in for a properly sized component.

5. Inspect each component using Table 1, WP 0010, Preventive Maintenance Checks and Services.

END OF TASK
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III

**WARNING**

Confirm that sizes of the front and back vest carriers match by comparing data label information. Ensure the sizes of the attachable components match the sizes of the front and back vest carriers by comparing information on the data label. Failure to do so could affect performance, causing injury or death to personnel.

**NOTE**

The term interior fabric or interior surface is the side of any component of the IBA system that faces the Soldier when worn. The term exterior fabric or exterior surface is the side of any component of the IBA system that faces away from the Soldier.

The term inside surface, inside fabric or inside is the area of any IBA component that is between the exterior and interior surfaces. The inside or inside surface of an IBA component is the portion that touches the soft ballistic inserts.

**Inserting Soft Ballistics**

1. Place the front vest carrier on a clean surface with the exterior surface facing down (Figure 1).

![Figure 1. Front Vest Carrier with Exterior Facing Down.](image)

2. Place the soft ballistic insert on a clean surface with the data label facing up.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Inserting Soft Ballistics – Continued.

3. Fold the sides and then the shoulders in toward the center (Figure 2).

![Figure 2. Soft Ballistic Inserts Folded.](image)

4. Separate the hook and loop fastener tape on the interior fabric of the carrier.

   **NOTE**

   When inserting ballistics into the carriers, the correct placement is data label to data label. The label of the ballistic faces the label of the carrier.

5. Place soft ballistics inside the carrier (Figure 2).

6. Using your hand, smooth the soft ballistic insert so that it fits snugly inside the carrier and does not bulge or fold (Figure 3 (Actual vest material is not see-through.)).

![Figure 3. Flatten Soft Ballistics.](image)
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Inserting Soft Ballistics – Continued.

7. Reseal the hook and loop fastener tape, ensuring that the tape and fabric are smooth and have no folds or puckers.

8. Place the back vest carrier on a clean surface with the exterior surface facing down.

9. Place the soft ballistic insert on a clean surface with the data label facing up.

10. Fold the sides and then the shoulders in toward the center.

11. Separate the hook and loop fastener tape on the interior fabric of the carrier.

12. Place soft ballistics inside the carrier.

13. Using your hand, smooth the soft ballistic insert so that it fits snugly inside the carrier and does not bulge or fold.

14. Reseal the hook and loop fastener tape, ensuring that the tape and fabric are smooth and have no folds or puckers.

15. Place the lower back protector carrier on a clean, flat surface with the exterior surface facing down.

16. Place the soft ballistic insert on a clean surface with the data label facing up.

17. Separate the hook and loop fastener tape to the ballistic compartment of the carrier, and insert the soft ballistics inside the carrier (Figure 4).

18. Use your hand to smooth the inserts and ensure that there are no folds or bulges, and reseal the hook and loop tape.

Figure 4. Lower Back Protector Carrier with Ballistic Insert.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Inserting Soft Ballistics – Continued.

19. Repeat steps 15 through 19 for the deltoid protector carrier.

![Deltoid Protector Carrier with Ballistic Insert](image)

Figure 5. Deltoid Protector Carrier with Ballistic Insert.

20. Place the groin protector carrier on a clean surface with the exterior facing up and the label side facing down (Figure 6).

Figure 6. Groin Protector Carrier.

21. Place the soft ballistic insert on a clean surface with the data label facing down.
Assemble IOTV Gen III – Continued

Inserting Soft Ballistics – Continued.

22. Open the cover flap at the top of the groin protector carrier.
23. Insert the soft ballistic insert with the label facing the body.
24. Place the plastic insert between the exterior surface of the groin protector carrier and the soft ballistic insert with the curve facing the body (Figure 7).

Figure 7. Plastic and Soft Ballistic Inserts in Groin Protector Carrier.
25. Secure the hook and loop tape at the top of the opening.

END OF TASK

Inserting Hard Armor Plates

1. Place the front vest carrier on a clean surface with the exterior surface facing down.
2. Separate the hook and loop fastener tape on the interior fabric of the carrier.
Assemble IOTV Gen III – Continued

Inserting Hard Armor Plates

3. Lift the soft ballistic insert to reveal the hard armor pocket (Figure 8, Item 1).

4. Unfasten the nylon strap at the bottom of the hard armor pocket (Figure 8, Item 2).

5. Ensure that the emergency release cables are laying flat inside the compartment.

6. Place SAPI into the hard armor pocket with the data label-side facing up (Figure 9).

7. Push the plate all the way up inside the vest until it is even with the bottom of the plate pocket.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Inserting Hard Armor Plates – Continued.

8. Securely attach the hook and loop strap to hold the plate firmly in place (Figure 10).

9. Smooth the soft ballistic inserts inside the carrier, ensuring there are no folds or buckles, and close the vest opening.

10. Reseal the hook and loop fastener tape on the interior of the carrier, ensuring there are no folds or puckers.

11. Place the back vest carrier on a clean surface with the exterior surface facing up.

**WARNING**

The back carrier is designed with two pockets for hard armor plates (SAPI)—one for a SAPI that is the same size as the IOTV Gen III and one for a SAPI that is the next size larger than the IOTV Gen III. Both pockets are accessed by the same exterior panel.

The pocket closest to the exterior of the back carrier is the smaller of the two and designed to carry a SAPI that is the same size as the vest assembly. The pocket closest to the body is designed to carry a SAPI that is the next size larger than the back carrier.

Ensure that the SAPI fits snugly in the pocket into which it is inserted. Failure to do so could adversely affect the protection provided, causing injury or death to the service member.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Inserting Hard Armor Plates – Continued.

12. Separate the hook and loop fastener tape of the top access panel just below the drag strap (Figure 11).

![Figure 11. Top Access Panel Open.](image)

13. Compare the size on the data label of the hard armor plate to the size on the data label of the back carrier.
   
   a. If the SAPI is the same size as the back carrier,
      
      (1) Separate the hook and loop tape sealing pocket 1 (the pocket closest to the exterior of the carrier and the smaller of the two) (Figure 9).
      
      (2) Insert the SAPI with the data label side down.
      
      (3) Ensure the plate is even with the top of the pocket opening.
      
      (4) Reseal the hook and loop fastener tape to the interior pocket, ensuring there are no folds or puckers.
      
      (5) Reseal the hook and loop fastener tape of the top access panel.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Inserting Hard Armor Plates – Continued.

b. If the SAPI is the next size larger than the carrier,

   (1) Insert the SAPI with the data label side down in pocket 2 (the pocket closest to the body and the larger of the two pockets) (Figure 12).

   (2) Ensure the plate is even with the top of the pocket opening.

   (3) Reseal the hook and loop fastener tape on the exterior of the carrier, ensuring there are no folds or puckers.

Figure 12. Additional Pockets for Hard Armor.

END OF TASK
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Installing Yoke/Collar Assembly

1. Place the front carrier on a flat surface with interior/label side facing up.
2. Place the front yoke/collar in line with the carrier with the label side facing up.
3. Separate the hook and loop holding the 2-inch webbing straps on the exterior side of the yoke/collar.
4. Insert the two straps into the webbing tabs located at the top of the shoulders on the carrier, and reattach the strap to the hook and loop on the yoke/collar (Figure 13).

Figure 13. Webbing Straps on Yoke/Collar Assembly.

5. Thread the two lower straps through the webbing tabs on the carrier (Figure 14).

Figure 14. Lower Straps Threaded.
Assemble IOTV Gen III – Continued

Installing Yoke/Collar Assembly – Continued.

6. Snap the straps to the yoke/collar and check for proper alignment along the neck opening (Figure 15).

7. Place the back carrier on a flat surface with interior/label side facing up.

8. Align and connect the hook and loop fasteners on the back yoke/collar with the back carrier (Figure 16).
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Installing Yoke/Collar Assembly – Continued.

9. Thread the two straps through the webbing tabs on the carrier.

10. Weave the straps back through the webbing tabs on the yoke/collar (Figure 17).

11. Snap the straps to the yoke/collar.

12. Adjust the hook and loop fasteners between the front carrier and the yoke/collar for proper alignment along the neck opening (Figure 18).

Figure 17. Straps on Back of Yoke/Collar.

Figure 18. Back Yoke/Collar Aligned.

END OF TASK
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Installing Side Plate Carrier Pockets

1. Place the side plate carriers on a clean, smooth surface with the label side facing up (Figure 19).

   ![Figure 19. Side Plate Carriers.](image)

   NOTE
   
   The side plate carriers and side plate pockets are universal and can be used for either the left or right sides until assembled. Before attaching the pockets identify the left and right sides for each. The pocket opening should be facing up. Maintain the correct orientation when attaching the side plate carrier to the front and back vests.

2. Specify the side plate pockets and side plate carriers as left and right side.

3. Place the pocket on the side plate carrier with the data label facing down and the pocket opening at the top, and position the pocket on the side plate carrier to give maximum protection (Figure 20).

   ![Figure 20. Right Side Plate Carrier with Side Plate Pocket.](image)
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Installing Side Plate Carrier Pockets – Continued.

NOTE

The pouch attachment ladder system (PALS) on the side plate carrier and the side plate pocket provides the flexibility to fasten the pocket in the best position on the side plate carrier.

4. Weave the webbing straps on the side plate pocket through the PALS of the side plate carrier and at least one row of the PALS on the side plate pocket (Figure 21).

![Figure 21. PALS on Side Plate Pocket and Carrier.](image)

5. Snap the webbing straps to the side plate pocket.

6. Open the side plate pocket by separating the hook and loop tape and pulling out the flap.

7. Either the SBI or an extra small SAPI may be used with the side plate pocket.
   a. If using the SBI
      (1) Insert the SBI into the pocket with the label facing the label side of the pocket on the interior/body side.
      (2) Fold the flap of the pocket down and tuck it inside the pocket.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Installing Side Plate Carrier Pockets – Continued.

b. If using the extra-small SAPI,
   
   (1) Slide the extra-small SAPI into the pocket bottom first with the label facing the label side of the pocket on the interior/body side.
   
   (2) Carefully slide the upper flap over the top of the SAPI (Figure 22).

8. Follow steps 6 and 7 to install the hard armor in the second pocket.

END OF TASK

Installing Side Plate Carriers

1. Place the side plate carriers on a flat surface with the label side facing down.

2. Place the back carrier on a flat surface with the label side facing down.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Installing Side Plate Carriers – Continued.

3. Lift up the lower panel on the exterior of the back carrier with the webbing strap to expose the attachment points for the side plate carrier.

NOTE

The girth of the side plate carrier is adjusted with webbing hangers threaded through the webbing on the back carrier. Ensure the PALS side is facing up and the data label side is facing down on the side plate carrier.

4. Route the end of the side plate carrier with the three webbing loops through the corresponding wing channel of the back carrier until the loops are in line with the PALS on the back carrier.

5. Snap open the top of the webbing hanger (Figure 23).

Figure 23. Webbing Hanger Snap Open.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Installing Side Plate Carriers – Continued.

6. Slide the webbing hanger through the top webbing loop on the side plate carrier, through the PALS on the back carrier, and then the remaining two loops on the side plate carrier. (Figure 24).

7. Snap the top of the webbing hanger back to close and lock it.

8. Repeat steps 13 through 16 to attach the remaining side plate carrier to the back carrier.

9. Close the back panel of the back carrier and tuck the flap up and in.

10. Try on the side plate carrier with the side plate pockets and ballistics installed to ensure that the location of the hard armor is directly under the arm and to evaluate fit in accordance with [WP 0007].

END OF TASK
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Attaching Front and Back Vests

1. Place the front and back carriers on a flat surface with the exteriors facing up.
2. Align the front and back carriers with the exterior sides up, right shoulder to right shoulder and left shoulder to left shoulder (Figure 25).

Figure 25. Front and Back Vest Carriers.
Assemble IOTV Gen III – Continued

Attaching Front and Back Vests – Continued.

3. Separate the hook and loop overlays at the shoulders of the front carrier (Figure 26).

![Figure 26. Shoulder Overlays Open.](image)

4. Connect the buckles at the left and right shoulders (Figure 27).

![Figure 27. Buckle at Shoulder.](image)
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Attaching Front and Back Vests – Continued.

5. Align and fasten the hook and loop on the left and right shoulder overlays (Figure 28).

![Figure 28. Fasten Hook and Loop at Shoulder.](image)

6. Ensure that the yoke/collar assemblies are aligned.

**WARNING**

Verify that the placements of the side plate pockets are still located directly under the arms to ensure maximum protection. Failure to do so could adversely affect the protection provided, causing injury or death to the service member.

7. Try on the vest assembly with the side plate carrier attached to evaluate the fit. Ensure that the side plate carrier fits snugly to the body when buckled. For additional information about evaluating and adjusting the fit, see [WP 0007](#).

END OF TASK

Attaching Lower Back Protector

1. Place the back carrier on a flat surface with the exterior side facing down.

2. Place the lower back protector on a flat surface with the exterior side facing down and the label side facing up.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Attaching Lower Back Protector – Continued.

3. Flip the lower back protector up and slide the webbing straps through the webbing on the interior back carrier.

4. Flip the lower back protector down and adjust the webbing straps to lay flush with the liner side of the back carrier (Figure 29).

Figure 29. Lower Back Protector Attached to Back Carrier.

END OF TASK
WARNING

Do not include the flap of the back yoke/collar when attaching the deltoid protector to the carrier. Doing so may prevent the cable release from operating correctly and could affect performance, causing injury to personnel.

NOTE

Deltoid protectors are universal. There is no right or left deltoid protector.

1. Place the deltoid protector on a flat surface with the label side facing up on top of the yoke/collar and vest assembly.
2. Slide the deltoid protector upper strap between the yoke/collar at the shoulder of the vest assembly (Figure 30).

Figure 30. Attach Deltoid Protector to Vest Assembly.
Assemble IOTV Gen III – Continued

Attaching Deltoid Protectors – Continued.

3. Pass the strap around the shoulder of the vest assembly, and fasten it to the hook and loop on the back side of the deltoid protector (Figure 31).

4. Fold the deltoid protector over and ensure that the strap is flat and the deltoid protector exterior surface is facing up.

5. Use the same procedure for attaching both right and left deltoid protectors.

6. Secure the deltoid protector around the arm by pulling the loose end of the attachment strap around the arm and securing the hook and loop material.

END OF TASK
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Attaching Groin Protector

**WARNING**

Securely attaching the groin protector to the ACU trousers provides maximum protection (Figure 32). The groin protector of the IOTV Gen III is not designed to be attached to the front carrier except for storage purposes. Attaching the groin protector to the front vest carrier will reduce effectiveness of protection, and this may result in injury to personnel.

Figure 32. Groin Protector Attached Properly.
ASSEMBLY AND PREPARATION FOR USE – CONTINUED

Assemble IOTV Gen III – Continued

Attaching Groin Protector – Continued.

1. Attach the two clips on the groin protector carrier to the waistband of the trousers (Figure 33).

2. Thread the webbing on both sides of the groin protector through the belt loops on the trousers (Figure 34) and then fold the webbing back over, fastening the hook and loop.

Figure 33. Groin Protector Clipped to Trousers.

Figure 34. Groin Protector Attached to Belt Loops.

END OF TASK
NOTE

The groin protector is worn securely fastened to the waist of the ACU trouser. The attachment straps are for storing the groin protector to the front carrier and are tucked into the groin protector carrier when being worn on the trousers.

1. Place the groin protector on a flat surface with the label side facing down.
2. Place the front carrier on a flat surface with the exterior facing down and the label side facing up.
3. Flip the groin protector up and slide the webbing straps on the groin protector through the webbing on the front vest assembly (Figure 35).

Figure 35. Attach Groin Protector to Front Vest Carrier.

4. Flip the groin protector down and adjust the webbing straps to lay flush with the interior of the front carrier.
5. Ensure that the webbing straps are inserted through the buttonhole in the top of the groin protector (Figure 36).

Figure 36. Buttonhole on Groin Protector.

END OF TASK

END OF WORK PACKAGE
INITIAL SETUP

References

WP 0005

DON

Prior to donning your IBA, attach all the components necessary to meet mission requirements in accordance with WP 0005.

NOTE

When the IBA is worn and adjusted correctly, there will be at least ½-inch overlap of fabric where the front and back carriers join at the shoulder.

1. If both shoulder straps are connected, slip the vest assembly over your head.
2. Alternatively, disconnect one of the shoulder straps and enter the vest from the side.
3. Pull vest assembly up to ensure that the yoke/collar protects the throat.
4. Pull down on the strap to the front access panel.
5. Lift up the front panel of the front carrier to expose the side plate carrier attachment points.

WARNING

For maximum protection it is important to hold the side of the front carrier along the side of the body when pulling the side plate carrier around to the front of the body. Failure to do so will result in reduced protection and could result in injury or death to the service member.
DON – CONTINUED

6. Use one hand to hold the side of the front carrier under the arm to keep it smooth and snug, and with the other hand pull the side plate carrier towards the center of the front carrier (Figure 1).

![Figure 1. Secure Side Plate Carrier.](image)

7. Tighten or loosen the webbing strap to ensure a snug fit, and then connect the buckle.

8. Repeat for the other side.

![Figure 2. Attach Side Plate Carrier.](image)
9. Lower the front flap and tuck the end of the flap into the lower pocket.
10. If installed, wrap the strap of the deltoid protectors securely around your biceps.

END OF TASK

DOFF

Standard Release Method

**WARNING**

Use the emergency release system for emergencies or instructional purposes only. Using the emergency release method to routinely doff the vest could result in damage to the hard armor plates. Damage to the hard armor will result in reduced protection and could cause serious injury or death to the service member.

1. If attached, remove the deltoid protector attachment straps from the arms.
2. Pull down on the strap to the front panel of the front carrier and lift the panel up.
3. Detach both buckles of the side plate carrier.
4. Lift the vest over the head, or disconnect one of the side release buckles at the shoulder and remove the vest assembly.

Emergency Release Method

**NOTE**

The emergency release function is for use in emergency situations and instructional purposes only.
DOFF – CONTINUED

Emergency Release Method – Continued

1. Locate the emergency release strap just below the neckline (Figure 1).

![Emergency Release Strap](image)

Figure 3. Emergency Release Strap.

**WARNING**

When using the emergency release function in a training or non-emergency event, do not allow the vest to fall to a solid floor. The impact may damage the hard armor plates and could compromise the effectiveness of the plates. Damage to the hard armor will result in reduced protection and could cause serious injury or death to the service member.

2. Pull the strap down. The vest assembly separates into two halves with the deltoid protectors still on your arms.

3. Allow the deltoid protectors to drop free from your arms to the ground.

END OF TASK

END OF WORK PACKAGE
INITIAL SETUP

References

WP 0005
WP 0006

Proper fit is achieved when the vest assembly fits snugly with no folds against the body. This ensures the vest assembly will not move around or expose unprotected areas on the operator.

EVALUATE FIT

1. Don the vest assembly in accordance with WP 0006.
2. With the side plate carriers buckled to the front carrier, evaluate the fit.
   a. Bottom of hard armor plates in side plate pockets align as closely as possible to the bottom of the hard armor in the front carrier.
   b. Hard armor plates in the side plate pockets are positioned directly under the arm.
   c. The vest assembly fits securely and does not move when turning body side to side.
   d. There is at least a ½-inch overlap of fabric where the front and back carriers join at the shoulder.
3. Note the adjustment needed, and proceed to Adjust Fit below.

END OF TASK

ADJUST FIT

Adjust Fit of Side Plate Carrier and Side Plate Pockets

1. Place the vest assembly on a clean, flat surface with the front vest facing down.
2. Lift up the lower panel on the exterior of the back carrier with the webbing strap to expose the attachment points for the side plate carrier.
ADJUST FIT – CONTINUED

Adjust Fit of Side Plate Carrier and Side Plate Pockets – Continued

3. Pull outward on the webbing hanger’s pull cord to release the webbing lock (Figure 1).

![Figure 1. Webbing Hanger Lock Released.](image)

4. Slide the webbing hanger out of the webbing loops and remove the side plate carriers from the back carrier.

5. Remove the hard armor plates from the pockets if necessary.

6. Unsnap and detach the pockets from the side plate carriers.

7. Reposition the pockets on the PALS of side plate carriers, and reattach the pockets in accordance with [WP 0005](#).

8. Place the hard armor plates back in the pockets if necessary.

9. Route the end of the side plate carrier with the webbing loops through the corresponding wing channel of the back vest carrier until the loops are in line with the PALS on the back vest carrier.

**NOTE**

Adjust the position of the side plate carriers evenly on the back carrier.

10. Position the side plate carriers on the back carrier.

   a. Tighten the fit by adjusting the side plate carriers inward.

   b. Loosen the fit by adjusting the side plate carriers outward.

11. Rethread the webbing hanger through the webbing loops on the back carrier and side plate carriers.
ADJUST FIT – CONTINUED

Adjust Fit of Side Plate Carrier and Side Plate Pockets – Continued

12. Snap the lock backwards at the top of the webbing hanger to close and lock it.
13. Align the hook and loop of the access panel and the back carrier,
14. Reseal the hook and loop fastener tape, ensuring that the tape and fabric are smooth and have no folds or wrinkles.
15. Tuck the bottom of the panel into the back flap pocket.
16. Don the vest and buckle the side plate carrier.
17. Adjust the webbing straps at the buckles ensuring all straps are adjusted evenly.
18. Ensure that the side plate carrier fits snugly to the body when buckled and that the side plate pockets are located directly under the arms.

Adjust Fit of Vest Assembly

1. Remove the deltoid protectors if attached.
2. Detach the hook and loop tape of the shoulder overlays on the vest assembly.
3. Adjust the right and left shoulder straps evenly.
4. Pull up on the webbing straps, and either loosen or tighten the straps to get the correct fit.
4. When the vest fits firmly and comfortably on the body, ensure all straps are adjusted evenly.
5. Align and reattach the hook and loop tape on the left and right shoulder overlays.

NOTE

END OF TASK

END OF WORK PACKAGE
INITIAL SETUP

FM 3-11.3

INTERCEPTOR BODY ARMOR (IBA)

The IBA is constructed to function in various temperature ranges and displays resistance to potentially caustic elements such as salt water.

Unusual Environment/Weather

Hard Armor Ballistic Inserts. The hard armor ballistic inserts are designed to be structurally and ballistically functional from -60 to 160 degrees Fahrenheit. The inserts are also designed for resistance to fluids such as oil, JP 8, and salt water.

Soft Ballistic Inserts. The soft ballistic inserts are designed to meet 97.6% of the minimum performance of a dry sample when hot or cold, and 92.7% of the minimum performance of a dry sample when wet or oil or JP 8 soaked. Extreme heat or cold does not affect the ballistic inserts.

Fording and Swimming

Swimming or fording while wearing the IOTV Gen III could be fatal because of the weight of the system. Before swimming or fording doff the IOTV Gen III by using either the normal or emergency release methods.

Interim Chemical, Biological, Radiological and Nuclear (CBRN) Decontamination Procedures

If the IBA is exposed to any Chemical, Biological, Radiological, and Nuclear (CBRN) elements dispose of it in accordance with FM 3-11.3.

END OF WORK PACKAGE
CHAPTER 3

PREVENTIVE MAINTENANCE CHECKS AND SERVICES FOR IMPROVED OUTER TACTICAL VEST GEN III (IOTV GEN III)
INTRODUCTION

Preventive Maintenance Checks and Services (PMCS) are performed to keep clothing items in good serviceable condition and ready for issue. Pay attention to WARNING, CAUTION, and NOTE statements. A WARNING indicates that someone could be hurt or killed. A CAUTION indicates that equipment could be damaged. A NOTE may make your maintenance or repair task easier.

Be sure to perform scheduled PMCS. Always perform PMCS in the same order so it becomes habit. With practice, you will quickly recognize problems with the equipment.

Use DA Form 2404, Equipment Inspection and Maintenance Worksheet, to record any discovered faults. Do not record faults that you fix!

PMCS PROCEDURES

Table 1. Preventive Maintenance Checks and Services (PMCS). Lists inspections and care required to keep your equipment in good operating condition. It is arranged so that you can perform before operation checks as you walk around the equipment.

EXPLANATION OF PMCS TABLE COLUMNS:

Item Number. Indicates the reference number. When completing DA Form 2404, Equipment Inspection and Maintenance Worksheet, include the item number for the item to check/service indicating a fault. Item numbers appear in the order you must perform the checks/services listed.

Interval. Indicates when you must perform the procedure in the procedure column.

- **Before** - perform before equipment operation
- **During** - perform during equipment operation
- **After** - perform after equipment has been operated
- **Weekly** - perform every week
- **Monthly** - perform each month
- **Hours** - perform at the noted hourly interval

Item to Check/Service. Indicates the item to be checked or serviced.
PMCS PROCEDURES – Continued

Procedure. Indicates the procedure you must perform on the item listed in Item to Check/Service column. You must perform the procedure at the time specified in the Interval column.

Not Fully Mission Capable If. Indicates faults which will prevent your equipment from performing its primary mission. If you perform procedures listed in Procedure column which show faults listed in this column, do not operate the equipment. Follow standard procedures for maintaining the equipment or reporting equipment failure.

Other Special Entries. Observe all special information and notes that appear in Table 1. When a check/service procedure is required for both weekly and before intervals, it is not necessary to perform the procedure twice if the equipment is operated during the weekly period.

COMMON CHECKS AND CLEANING

Cleaning

Observe the cleanliness of clothing articles as part of the item’s serviceability. Remove loose dirt, sand, and debris from all items.

Corrosion Prevention and Control

Plastics, composites, and rubbers can degrade. Degradation is caused by thermal (heat), oxidation (oxygen), solvation (solvents), or photolytic (light, typically ultraviolet) processes. The most common exposures are excessive heat or light. Damage from these processes will appear as cracking, softening, swelling, and/or breaking. Avoid contact with all solvents.

General

Preventive maintenance checks and services (PMCS) are performed to keep the IOTV Gen III in operating condition. The checks are used to find, correct, and report problems. The operator is to do the PMCS tasks shown in Table 1.

PMCS tasks in Table 1 are to be done before and after use of the IBA system and monthly.

Before you use the IOTV Gen III, perform PMCS.

After you have used the IOTV Gen III, perform PMCS.
Table 1. Preventive Maintenance Checks and Services.

Hand wash all components, except hard armor plates, soft ballistic inserts and emergency release assembly (Figure 7).

![Figure 7. Cleaning Restrictions.](image)

**WARNING**

Washing IOTV components in hot water will damage the fabric. Hand wash IOTV components in cold water only.

a. Remove dirt from outer surface using a cloth or soft bristle brush.

b. Hand wash IOTV outer-shell and component carrier covers only in cold or warm water, with mild detergent or soap.

c. Air dry all components away from direct heat or sun.

END OF TASK
MANDATORY REPLACEMENT PARTS

There are no mandatory replacement parts for the IOTV GEN III.

END OF TASK

END OF WORK PACKAGE
CHAPTER 4

MAINTENANCE INSTRUCTIONS
FOR
IMPROVED OUTER TACTICAL VEST GEN III
(IOTV GEN III)
General Storage Requirements

Administrative storage will be in accordance with the following:

1. Clean all items and ensure they are dry before IBA is placed in storage. Store each individual IBA in a plastic bag to keep out dirt, dust and moisture. Placement of clothing items in administrative storage should be for short periods of time. Ensure all items are protected from pilferage, dampness, fire, dirt, and rodents.

2. Insert the SAPI/SBI into the IBA pockets in the same manner as when worn. This prevents loss of components. Store the IBA system as flat as possible to avoid bunching of materials.

3. Items should be in mission readiness within 24 hours or within the time factors as determined by the directing authority.

4. During the storage period, appropriate maintenance records will be kept. Before placing equipment in administrative storage, current maintenance services and equipment serviceable criteria evaluations should be completed, shortcomings and deficiencies should be corrected, and all modification work orders should be applied.

5. Inside storage is preferred for items selected for administrative storage. If inside storage is not available, trucks, vans, CONEX containers and other containers may be used.

In-Storage Inspection

1. Check that no damage or deterioration has occurred.

2. Check the adequacy of the storage facilities, efforts taken to control pests and rodents, and protection against unfavorable climatic conditions and other elements that might cause damage to clothing items.

Shipment Requirements

Ensure all items are protected from pilferage, dampness, fire, dirt, and rodents.

END OF WORK PACKAGE
INITIAL SETUP

Tools and Special Tools
- Brush (WP 0020, Item 1)

Materials/parts
- Soap, Mild (WP 0019, Item 2)

GENERAL CLEANING INSTRUCTIONS

WARNING

Failure to follow all cleaning instructions could deteriorate, damage, or destroy the IBA, rendering it useless against ballistic threats.

To maintain your IBA so that it provides you with the maximum protection intended, it is extremely important to follow proper cleaning procedures. Do not bleach, machine wash, dry clean, or apply solvents, cleaning fluids, or yellow soap to any part of the IBA. They will discolor and/or deteriorate the IBA. Do not attempt to dye item or fix discolorations.

IBA Vest Assembly and Components

WARNING

Do not machine wash or dry. Failure to follow these instructions may render your IBA useless against ballistic threats.

CAUTION

Do not use a stiff brush to clean any part of your IBA as this will damage the material.

1. Remove loose dirt and lint from the outer shell using a cloth or soft bristle brush. Never use a stiff bristle brush.
2. Remove all soft ballistic inserts and the hard armor plates from the outer shell and component carriers.
GENERAL CLEANING INSTRUCTIONS – CONTINUED

IBA Vest Assembly and Components - Continued

CAUTION

Never use bleach, yellow soap, cleaning fluids or solvents to clean the outer shell as this will stain and damage the material.

3. Hand-wash the outer shell and component carrier covers in cold or warm water, with mild detergent or soap.

4. Badly soiled areas may be scrubbed. Scrub only long enough to remove soil.

5. Grease and oil stains may be pre-spotted with a mild detergent and water mixture, and scrubbed with a soft brush. If stubborn stain persists, repeat the procedure.

6. Rinse the outer shell and covers thoroughly in clean, warm water until suds are completely gone.

7. Air-dry indoors or in shade, away from heat sources and direct sunlight.

END OF TASK

Soft Ballistic Inserts

WARNING

Do not machine wash or dry the soft ballistic inserts. Failure to follow these instructions may render the IBA useless against ballistic threats.

CAUTION

Do not intentionally submerge soft inserts in any liquid, including water. Do not use a stiff brush to clean any part of your IBA as this will damage the material.

Cleaning of the soft ballistics inserts is limited to removing loose dirt from the surface with a cloth or soft brush. If ballistic inserts become wet, allow to air dry in a flat position away from heat sources and direct sunlight. If ballistic insert becomes saturated with liquids such as gasoline, bleach or other lubricants, turn in for replacement as soon as possible.

END OF TASK
GENERAL CLEANING INSTRUCTIONS – CONTINUED

Hard Armor Plates

**WARNING**

Do not machine wash or dry the SAPI/SBI inserts. Failure to follow these instructions may degrade the SAPI/SBI ballistic protection.

**CAUTION**

Do not submerge SAPI/SBI inserts in any liquid, including water.

Do not use a stiff brush to clean any part of your IBA as this will damage the material.

1. Remove loose dirt and lint from the outer surface of the SAPI/SBI using a cloth or soft bristle brush. Never use a stiff bristle brush.

2. Wet the SAPI/SBI in a sink or shower using warm, not hot, water.

3. Apply a mild soap or detergent to the soiled areas and scrub with a cloth or soft bristle brush.

4. Badly soiled areas may be scrubbed with mild soap or detergent.

5. Scrub only long enough to remove soil.

6. Rinse the SAPI/SBI with warm water until all suds are completely gone.

7. Let the insert dry by itself, away from heat or open flame.

END OF TASK

END OF WORK PACKAGE
INITIAL SETUP

Materials/parts
- Kit, Sewing [WP 0019, Item 1]
- Tape, Pressure Sensitive Adhesive [WP 0019, Item 3]

REPAIR

WARNING

Fabric repair in this work package does not apply to the fabric on the soft ballistic inserts. Any damage to the soft ballistic inserts is cause for turn-in. Failure to follow these instructions could result in degraded ballistic protection.

This work package provides instructions for repairing the fabric of the IBA.

Outer Shell

1. To mend a ripped seam, overlap the two-edge and sew with straight and small stitches (Figure 1).

![Figure 1. Straight Stitch.]

2. To repair a tear, place the two edges together on the inside, and sew together (Figure 2).

![Figure 2. Edge Sew.]
REPAIR – CONTINUED

3. To mend a frayed edge, turn the frayed edge under and sew (Figure 3).

![Image](image)

Figure 3. Turn Edge Under and Sew.

NOTE

Cloth backed adhesive tape is often referred to as duct tape, rigger’s tape or 100 mile-per-hour tape.

4. Interim repairs can be made with cloth backed adhesive tape to prevent tears or holes in the carrier from expanding until the vest can be exchanged. The tape can be used to keep the vest closed, hold the ballistic panels in place, or repair any hook and pile that has been damaged.

END OF TASK

END OF WORK PACKAGE
INITIAL SETUP

Materials/parts:
- Tape, Pressure Sensitive Adhesive [WP 0019, Item 3]

INSPECT

**WARNING**

Soldiers must ensure they have the correct protective inserts. The ESAPI and ESBI have green covers and the XSAPI and XSBI have tan covers. All of these inserts provide a higher level of protection than the Small Arms Protective Insert (SAPI) and the Side Ballistic Inserts (SBI) which have black covers.

ESAPI should be worn by all personnel in theater. If a service member has the older black SAPI plates, they should be turned in and replaced with green ESAPI plates. Failure to ensure the correct plate while conducting combat operations may result in injury or death.

Pre-combat Inspection

The Soldier must inspect the insert before each mission. The SAPI/SBI insert must be turned in if any of the following conditions are present:

- Outer cover is damaged exposing the ceramic tile material.
- Plate is cracked and you hear loose pieces rattling around when shaken.
- Creaking or squeaking of ceramic tile heard when plate twisted by hand.
- Composite backing is delaminating (backing material plies are separating).
- Cracking of the ceramic tile is felt or heard as you firmly pinch the outer ½-inch perimeter of the plate.
- Plate has been hit by a bullet or fragment.

END OF TASK
REPAIR

NOTE

Cloth backed adhesive tape is often referred to as duct tape, rigger’s tape or 100 mile-per-hour tape.

Interim repairs of the SAPI/SBI outer cover can be made using cloth backed adhesive tape until it can be exchanged. This repair does help to prevent the spread of existing delamination. It is not meant as a permanent fix.

END OF TASK

END OF WORK PACKAGE
OPERATOR MAINTENANCE
IMPROVED OUTER TACTICAL VEST GEN III
HARDWARE AND EMERGENCY RELEASE ASSEMBLY – INSPECT, REPAIR

INITIAL SETUP:

Tools and Special Tools
Multi-tool (WP 0020, Item 2)

References
WP 0007

Materials/Parts
None Required

INSPECT

Pre-combat Inspection

The Soldier must inspect the acetyl hardware (male and female buckle ends, webbing hangers, and D-rings) and emergency release assembly before each mission.

END OF TASK

REPAIR

Replace the Male Buckle End

There are four male buckle ends on the front carrier—one on each shoulder and two at the attachment points for the side plate carrier.

**CAUTION**

Do not damage the webbing when breaking or removing the buckle ends. If the webbing is cut or damaged such that the buckle cannot be securely attached, turn the equipment in for replacement.

1. Break the damaged buckle end at the webbing.
2. Remove the screw from the catch lever.
3. Raise the catch lever on the buckle (Figure 1).

Figure 1. Catch Lever on Buckle.
REPAIR – CONTINUED

Replace the Male Buckle End – Continued

4. Squeeze the two flexible, lateral arms and lift the cable out of the housing on the neck in which it is seated.

5. Remove the damaged buckle from the webbing completely.

6. With the catch lever facing toward the exterior fabric, slide the replacement male buckle end into the webbing and snap it in place.

7. Raise the catch lever of the replacement buckle, and squeeze the flexible, lateral arms of the buckle.

8. Push the cable nut down at an angle and into the tray that slides out when the lateral arms are squeezed.

9. Ensure that the groove between the round, black-coated end of the cable and the remaining cable sleeve is firmly seated in housing.

**WARNING**

The cable must be seated correctly for the emergency release assembly to function properly. Failure to do so will affect performance of the emergency release and may cause injury or death to personnel.

10. Press the cable firmly into the channel until it snaps in place (Figure 2).

Figure 2. Cable in Buckle.
Replace the Male Buckle End – Continued

11. Push the catch lever over the cable to secure it.

**WARNING**

When the catch lever is closed, the edge of the round, black cable sleeve closest to the cable nut must be visible. If the cable is not placed correctly, remove the cable from the channel and reinsert it. Failure to do so will affect performance of the emergency release and may cause injury or death to personnel.

12. Complete a visual check to ensure that the cable is in the secure and correct position (Figure 3) when the lever is closed and not partially secure (Figure 4).

---

**Figure 3.** Correct and Secure Placement of the Cable.

**Figure 4.** Incorrect Placement of the Cable.
REPAIR – CONTINUED

Replace the Male Buckle End – Continued

13. Insert the catch lever screw and tighten.
14. Don the vest assembly without the hard armor plates.
15. Pull the emergency release assembly strap to test the emergency release assembly.

Replace the Adjustable Female Buckle End

There are two adjustable, double-bar female buckles—one on each side plate carrier (Figure 5).

Figure 5. Adjustable Buckle on Side Plate Carrier.

1. Unthread the webbing from the damaged buckle end on the side plate carrier.
2. Thread the webbing back through the replacement buckle end.
3. Adjust in accordance with WP 0007

Replace the Emergency Release Assembly

**WARNING**

If damage to any component of the emergency release assembly occurs, replace the complete assembly. Failure to do so will affect performance of the emergency release and may cause injury or death to personnel.

1. Remove the emergency release assembly cables from the buckles at each shoulder and the buckles at the side plate carrier attachment points on the front carrier.
2. Remove the screw from the catch lever.
REPAIR – CONTINUED

Replace the Emergency Release Assembly – Continued

3. Raise the catch lever of the buckle (Figure 6).

4. Squeeze the two flexible, lateral arms, lift the cable out of the housing on the neck in which it is seated, and remove the cable from the buckle.

5. Raise the top flap on the front carrier securing the emergency release assembly.

6. Lift up the emergency release buckle reinforcement.

7. Pull the emergency release assembly strap and completely remove the cable plate and the four cables from the front carrier (Figure 7).

Figure 6. Catch Lever on Buckle.

Figure 7. Emergency Release Assembly.
REPAIR – CONTINUED

Replace the Emergency Release Assembly – Continued

8. Route the cables of the replacement emergency release assembly to the buckle attachment points.
   a. Open the back of the front carrier.
   b. Pass the cables under the access panel at the top of the front carrier.
   c. Route the two outer cables with magenta markings to the buckle ends on the shoulders.
   d. Route the two inner cables with white markings to the buckle ends at the side plate carrier attachment points.

Figure 8. Cable Connection Points.
REPAIR – CONTINUED

Replace the Emergency Release Assembly – Continued

e. Slide the cable plate into position under the access panel.

f. Lower the emergency release buckle reinforcement ensuring that the emergency release strap is lying freely on top of the reinforcement (Figure 9).

![Figure 9. Emergency Release Assembly Strap and Buckle Reinforcement.](image)

g. Seal the hook and loop of the emergency release buckle reinforcement, and close the access panel.

9. Attach the cables to the four buckle ends on the front carrier (Figure 8).

a. Raise the catch lever of the replacement male buckle, and squeeze the lateral arms of the buckle.

b. Push the cable nut down at an angle and into the tray that slides out when the lateral arms are squeezed.

c. Ensure that the groove between the round, black-coated end of the cable and the remaining covered cable is firmly seated in housing.

10. Check for proper emergency release connections.

a. Remove all hard armor plates if installed.

b. Don the vest assembly.

c. Pull the emergency release assembly strap to ensure the vest assembly completely disengages.

d. Reattach the vest assembly in accordance with WP 0005.

END OF WORK PACKAGE
INTRODUCTION

Scope

This work package lists COEI and BII for the Improved Outer Tactical Vest Gen III (IOTV Gen III) to help you inventory items for safe and efficient operation of the equipment.

General

The COEI and BII information is divided into the following lists:

Components of End Item (COEI). This list is for information purposes only and is not authority to requisition replacements. These items are part of the IBA. As part of the end item, these items must be with the end item whenever it is issued or transferred between property accounts. Items of COEI are removed and separately packaged for transportation or shipment only when necessary. Illustrations are furnished to help you find and identify the items.

Basic Issue Items (BII). These essential items are required to place the IBA in operation, operate it and to do emergency repairs. Although shipped separately packaged, BII must be with the IBA during operation and when it is transferred between property accounts. Listing these items is your authority to request/requisition them for replacement based on authorization of the end item by the TOE/MTOE. Illustrations are furnished to help you find and identify the items.

Explanation of Columns in the COEI and BII List

Column (1) Illus Number. Gives you the reference number of the item listed.

Column (2) National Stock Number (NSN) and illustration. Identifies the stock number of the item to be used for requisitioning purposes and provides an illustration of the item.

Column (3) Description, Part Number/(CAGEC). Identifies the Federal item name (in all capital letters) followed by a minimum description when needed. The stowage location of COEI and BII is also included in this column. The last line below the description is the part number and the Commercial and Government Entity Code (CAGEC) (in parentheses).

Column (4) Usable On Code. When applicable, gives you a code if the item you need is not the same for different models of equipment.
**INTRODUCTION – CONTINUED**

**Explanation of Columns in the COEI and BII List – Continued**

**Column (5) U/I.** Unit of Issue (U/I) indicates the physical measurement or count of the item as issued per the National Stock Number shown in column (2).

**Column (6) Qty Rqr.** Indicates the quantity required.

**COMPONENTS OF END ITEM LIST**

END OF WORK PACKAGE
INTRODUCTION

Scope

This work package lists additional items you are authorized for the support of the IOTV Gen III.

General

This list identifies items that do not have to accompany the IOTV Gen III and that do not have to be turned in with it. These items are all authorized to you by CTA, MTOE, TDA, or JTA.

Explanation of Columns in the AAL

Column (1) National Stock Number (NSN). Identifies the stock number of the item to be used for requisitioning purposes.

Column (2) Description, Part Number/(CAGEC). Identifies the Federal item name (in all capital letters) followed by a minimum description when needed. The last line below the description is the part number and the Commercial and Government Entity Code (CAGEC) (in parentheses).

Column (3) Usable On Code. When applicable, gives you a code if the item you need is not the same for different models of equipment.

Column (4) U/I. Unit of Issue (U/I) indicates the physical measurement or count of the item as issued per the National Stock Number shown in column (1).

Column (5) Qty Recm. Indicates the quantity recommended.

END OF WORK PACKAGE
INTRODUCTION

Scope

This work package lists expendable and durable items that you will need to operate and maintain the IBA. This list is for information only and is not authority to requisition the listed items. These items are authorized to your by CTA 50-970, Expendable/Durable Items (Except Medical, Class V Repair Parts, and Heraldic Items), CTA 50-909, Field and Garrison Furnishings and Equipments or CTA 8-100, Army Medical Department Expendable/Durable Items.

Explanation of Columns in the Expendable/Durable Items List

Column (1) Item No. This number is assigned to the entry in the list and is referenced in the narrative instructions to identify the item (e.g., Use brake fluid (WP 0098, item 5)).

Column (2) Level. This column identifies the lowest level of maintenance that requires the listed item (include as applicable: C = Crew, O = Service/AMC, F = Field/ASB, H = Below Depot, D = Depot).

Column (3) National Stock Number (NSN). This is the NSN assigned to the item which you can use to requisition it.

Column (4) Item Name, Description, Part Number (CAGEC). This column provides the other information you need to identify the item. The last line below the description is the part number and the Commercial and Government Entity Code (CAGEC) (in parentheses).

Column (5) U/I. Unit of Issue (U/I) Code. Shows the physical measurement or count of an item, such as gallon, dozen, gross, etc.

USAPPC V3.00
By Order of the Secretary of the Army:

RAYMOND T. ODIERNO
General, United States Army
Chief of Staff

Official:

[Signature]
JOYCE E. MORROW
Administrative Assistant to the
Secretary of the Army
1231014

Distribution: To be distributed in accordance with Initial Distribution Number (IDN) 257959 requirements for TM 10-8470-210-10.
The Metric System and Equivalents

**Linear Measure**
- 1 centimeter = 10 millimeters = .39 inch
- 1 decimeter = 10 centimeters = 3.94 inches
- 1 meter = 10 decimeters = 39.37 inches
- 1 dekameter = 10 meters = 32.808 feet
- 1 hectometer = 10 dekameters = 328.08 feet
- 1 kilometer = 10 hectometers = 3,280.8 feet

**Liquid Measure**
- 1 centiliter = 10 milliliters = .34 fl. ounce
- 1 deciliter = 10 centiliters = 3.38 fl. ounces
- 1 liter = 10 deciliters = 33.81 fl. ounces
- 1 dekaliter = 10 liters = 2.64 gallons
- 1 hectoliter = 10 dekaliters = 26.42 gallons
- 1 kiloliter = 10 hectoliters = 264.18 gallons

**Weights**
- 1 centigram = 10 milligrams = .15 grain
- 1 decigram = 10 centigrams = 1.54 grains
- 1 gram = 10 decigrams = .035 ounce
- 1 dekagram = 10 grams = .35 ounce
- 1 hectogram = 10 dekagrams = 3.52 ounces
- 1 kilogram = 10 hectograms = 2.2 pounds
- 1 quintal = 100 kilograms = 220.46 pounds
- 1 metric ton = 10 quintals = 1.1 short tons

**Square Measure**
- 1 sq. centimeter = 100 sq. millimeters = .15 5 sq. inch
- 1 sq. decimeter = 100 sq. centimeters = 15.5 sq. inches
- 1 sq. meter = 100 sq. decimeters = 10.76 sq. feet
- 1 sq. dekameter = 100 sq. meters = 107.64 sq. feet
- 1 sq. hectometer = 100 sq. dekameters = 2.47 acres
- 1 sq. kilometer = 100 sq. hectometers = .386 sq. mile

**Cubic Measure**
- 1 cu. centimeter = 1000 cu. millimeters = .06 cu. inch
- 1 cu. decimeter = 1000 cu. centimeters = 61.02 cu. inches
- 1 cu. meter = 1000 cu. decimeters = 35.31 cu. feet
