**REQUIRED BASIC SKILLSET**

IOS Imagery Analyst in this position provides consultant service and/or monitors projects in interrelated geographical or functional fields; incumbent assignments are based on general objectives; their technical decisions are authoritative; and they are generally recognized as the organization's experts in their field. The incumbent manages Joint Production, Exploitation and Dissemination (PED) activities; contributes to the production of intelligence exploitation policies; and provides multi-disciplined National Technical Means, Commercial, and Intelligence, Surveillance, and Reconnaissance (ISR) collection and analysis to CBP operational components. Ensures analysis, of National and commercial collection platforms, is focused on Priority Intelligence Requirements (PIR) and Standing Information Needs (SIN) to implement risk informed intelligence driven operations against the highest threats.

Provides tactical and strategic level support to CBP operational components to inform and enhance operational and resource allocation decision making. This position is of a sensitive nature and the incumbent will be exposed to classified and/or sensitive information and programs. The incumbent serves as an Imagery Analyst (IA), providing detailed analysis of National and Commercial Imagery on a broad range of issues in support of national security objectives.

Performance of complex and timely imagery analysis in support of CBP Operations. Communication of analytical assessments clearly and succinctly both written and orally, and present analysis products and ideas in an operational environment. Processing, Exploiting and Disseminating (PED) of remotely sensed data such as Thermal/Infrared Imagery, Electro-Optical Imagery, Synthetic Aperture RADAR (SAR).
